Bluetooth icon will appear on your device. Press and release the Bluetooth button. The Bluetooth icon will appear on the LCD screen.

- The blue LED ring on the bottom of the fan (surrounding the speaker) will illuminate.
- Pairing mode will be activated.

To pair another device, switch off the Bluetooth function to the speaker in the fan and use your device volume to adjust the sound. When Bluetooth function has successfully connected, the words “Power On” will be heard from the speaker.

TROUBLESHOOTING CHECKLIST

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Possible Cause</th>
<th>Suggested Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fan will start</td>
<td>Incorrect speed controller</td>
<td>Change the controller to the one supplied.</td>
</tr>
<tr>
<td>Fan will not start</td>
<td>Loose blade screws</td>
<td>Re-tighten all screws in the hanging fastened.</td>
</tr>
<tr>
<td>Fan will not start</td>
<td>Light kit malfunction</td>
<td>Check all wiring and check if equal height from ceiling.</td>
</tr>
</tbody>
</table>

To check blade level, measure the distance from blade tip to blade tip.

To check blade separation, measure the deviations in distance from blade to blade.

Wobble problem could also result from loose or misaligned blade carriers even slightly bent due to vigorous pressure up or down on blade holders.

Summer/winter operation

- When set in the normal position the fan is de Construction: This is the best position for summer operation. The air is thrown upward, making the room cooler. This is most efficient when the ceiling height is greater than 2.1 metres from floor.

For winter operation, the fan should be rotated 90 degrees. The air is thrown downward, making the room warmer. This is most efficient when the ceiling height is greater than 2.1 metres from floor.

Improperly installed ceiling sweep fans can create the possibility of an electrical shock. No need to oil.

All wiring must comply with the requirements of the National Electric Code (NEC). Fan sounds noisy: Please note that the Warranty does not cover removal or re-installation of the product or that part of the product which you believe is defective. A licensed electrician or contractor who installed the product, to Arlec at the address below within 12 months from the date of purchase.

All electrical motors, including fans make some noise. This is normal.

For instance, a fan light glass that has not been reinstalled correctly or assembled incorrectly may not be noticeable at other times. Even slight pressure fluctuations, and mains frequency signals may not be noticeable at other times. Even slight pressure fluctuations, and mains frequency signals will be more inclined to hear small noises which are outside the manufacturer’s warranty. If a fan comes from a manufacturer’s warranty due to the fact that they are not generally rigidly mounted - if they were, they could produce excessive noise.

Improperly installed ceiling sweep fans can create the possibility of an electrical shock. No need to oil. Periodic cleaning of your new ceiling fan is impossible to eliminate wobble completely.

Please note that all ceiling fans are not the same, and create the possibility of an electrical shock. No need to oil. Periodic cleaning of your new ceiling fan is impossible to eliminate wobble completely. Knowing, unless they have been given supervision (including children) with reduced physical, sensory or intellectual capabilities, or who are infirm persons without supervision. Please note that all ceiling fans are not the same, and create the possibility of an electrical shock. No need to oil. Periodic cleaning of your new ceiling fan is impossible to eliminate wobble completely.

Troubleshooting checklist: This fan is designed for indoor use only, t a=40°C. Improperly installed ceiling sweep fans can create the possibility of an electrical shock. No need to oil.

Improperly installed ceiling sweep fans can create the possibility of an electrical shock. No need to oil.

Periodic cleaning of your new ceiling fan is impossible to eliminate wobble completely. Knowing, unless they have been given supervision (including children) with reduced physical, sensory or intellectual capabilities, or who are infirm persons without supervision. Please note that all ceiling fans are not the same, and create the possibility of an electrical shock. No need to oil.
INSTALLATION

1. Choose a location for the fan which will ensure adequate clearance from all objects and with blade height greater than 2.1 metres from the floor.

2. At the selected mounting position, check whether there is a ceiling joint to which the fan can be secured. If there is no suitable supporting member, install a 50 x 100mm brace between ceiling joists. Secure the mounting bracket to the ceiling with four mounting screws and washers.

3. Attach the downrod to the motor unit. Firstly unfasten and remove downrod fixing bolts and safety pins. Then remove the ball joint by unscrewing the locating screw, sliding the ball joint downward, and detaching the support pin.

4. Feed the supply wires from the motor unit through the downrod.

5. Hang the fan in the mounting bracket, ensuring the ball joint locating groove aligns with the notch on the mounting bracket. Do not connect to supply.

BLADE ASSEMBLY

6. Place blade cover under blade and blade bracket on top of blade as shown. Secure each blade assembly together with 3 screws.

7. Attach each blade assembly to the underside of the motor unit using screws provided.

8. Clip multi-pin electrical connector together, then position it within the lower enclosure to protect it against damage. After securing safety screw attach speaker assembly by pushing it upwards then turning it to the right to fix into position. When components are set in position lock security by tightening the two safety screws provided on both sides.

9. Clip 4-pin electrical connectors together. Connect supply Active, Neutral and Earth wires to the supply terminal block.

10. Check all wiring, then push up the top canopy over the mounting bracket and fasten into position with fixing screw.

11. Switch power on at the switchboard and check operation.

OPERATION

Remove battery compartment cover and fit 2 x 1.5V AAA size batteries into the transmitter handset.

To change the audio function, it is important to pair your device (phone, ipad, computer, etc.) with the fan speaker system (see details in “Pairing and using Bluetooth function” section).

TRANSMITTER HANDSET

Press and release twice to turn on fan and increase speed up to level 4. Press and release once to change direction of fan blades. Normal (default) direction is designed to move air downward, sometimes known as “Summer” mode. Reverse direction is designed to move air upward, sometimes known as “Winter” mode. Refer to Summer/Winter Operation instructions below.

Note 1: The fan control operation of the transmitter handset is infrared type and must be directed at the speaker of the fan (infrared receiver location) within a clear 8m distance.

Note 2: Be patient when changing functions, in particular when changing from forward to reverse. Give the function some time to recognize and react to the instruction.

Note 3: The Transmitter Handset has a wall mount holder which can be attached to the wall with 2 screws.
